IMPORTANT SAFETY INFORMATION

BYDUREON BCise may cause serious side effects, including:

• POSSIBLE THYROID TUMORS, INCLUDING CANCER Tell your healthcare provider if you get a lump or swelling in your neck, hoarseness, trouble swallowing, or shortness of breath. These may be symptoms of thyroid cancer. In animal studies, BYDUREON and medicines that work like it caused thyroid tumors, including thyroid cancer. It is not known if BYDUREON BCise will cause thyroid tumors or a type of thyroid cancer called medullary thyroid carcinoma (MTC) in people.

• Do not use BYDUREON BCise if you or any of your family members have ever had MTC or if you have an endocrine system condition called Multiple Endocrine Neoplasia syndrome type 2 (MEN 2)

Please read Medication Guide and Full Prescribing Information, including Boxed WARNING.
Welcome to a once-weekly treatment that’s at work 7 days a week

Your doctor has most likely explained about your new treatment plan, but when starting a new treatment plan it’s natural to have questions. Here you’ll find the information you need—and resources you can count on—to get your treatment off to a good start, and to help you stay on it.

BYDUREON BCise is a once-weekly, non-insulin prescription medicine used along with diet and exercise to help improve blood sugar in adults with type 2 diabetes. With continued once-weekly dosing, the amount of medicine in your body gradually builds up over 10 weeks until it reaches an optimal level to work in your body called steady state. Then, each weekly dose of BYDUREON BCise keeps a consistent level of medicine in your body, ready to work when you need it. This is why it’s important to keep taking one dose each week, even if you don’t see noticeable results right away.

BYDUREON BCise is not recommended as the first choice of medicine for treating diabetes. BYDUREON BCise is not a substitute for insulin and is not for people with type 1 diabetes or people with diabetic ketoacidosis.

Do not use BYDUREON, BYDUREON BCise, BYETTA or other medicines containing exenatide together.

It is not known if BYDUREON BCise can be used in people with a history of pancreatitis.

IMPORTANT SAFETY INFORMATION

BYDUREON BCise may cause serious side effects, including:

• POSSIBLE THYROID TUMORS, INCLUDING CANCER Tell your healthcare provider if you get a lump or swelling in your neck, hoarseness, trouble swallowing, or shortness of breath. These may be symptoms of thyroid cancer. In animal studies, BYDUREON and medicines that work like it caused thyroid tumors, including thyroid cancer. It is not known if BYDUREON BCise will cause thyroid tumors or a type of thyroid cancer called medullary thyroid carcinoma (MTC) in people

• Do not use BYDUREON BCise if you or any of your family members have ever had MTC or if you have an endocrine system condition called Multiple Endocrine Neoplasia syndrome type 2 (MEN 2)

• Do not use BYDUREON BCise if you have a history of low blood platelet count from using exenatide medicines (drug-induced thrombocytopenia)

• Do not use BYDUREON BCise if you have had an allergic reaction to exenatide or any of the other ingredients in BYDUREON BCise

Please read Medication Guide and Full Prescribing Information, including Boxed WARNING.
Proven to help lower blood sugar

As you keep up with your hectic life, it's important to keep in mind that type 2 diabetes can progress over time. So, you may need a different approach to your treatment to help manage blood sugar highs and lows—and reach your A1C goal.

BYDUREON BCise is a non-insulin, once-a-week injectable that works all week long.*

Along with diet and exercise, it has been proven to significantly lower A1C.

Here are some of the key benefits of BYDUREON BCise:

- One dose. Once a week. Lasts all week.
- Take BYDUREON BCise just once each week with or without food, on the same day that best fits your busy schedule.

In 2 clinical studies lasting 28 weeks, BYDUREON BCise lowered A1C by an average of 1.1% and 1.4% from an average starting A1C of 8.4% and 8.5%, respectively, when used alone or with certain oral type 2 diabetes medicine(s). Your results may vary.

In the same studies, BYDUREON BCise lowered weight by an average of 3 lb from average starting weights of 196 and 213 lb. BYDUREON BCise is not a weight-loss drug.

The most common side effects were injection site reaction and nausea. About 10 of 100 people (10.5%) had an injection site reaction. About 8 of 100 people (8.2%) had nausea. See page 10 for additional Important Safety Information.

In another clinical study, including patients with and without established cardiovascular disease, it was proven that BYDUREON, another formulation of exenatide extended-release, does not increase the risk of major cardiovascular events like heart attack, stroke or cardiovascular death. BYDUREON BCise is not approved to reduce the risk of cardiovascular events or death.

*After 10 weeks of continued once-weekly dosing.

†EXenatide Study of Cardiovascular Event Lowering (EXSCEL) Trial.
Once-weekly treatment with an extended-release delivery system

BYDUREON BCise has convenient once-weekly dosing and an extended-release delivery system. Each dose contains tiny beads that slowly dissolve to continuously release medicine into your body over time, helping your body release its own insulin, when needed, to help lower blood sugar.

BYDUREON BCise slowly releases medicine over time.

Illustration of a tiny bead dissolving, gradually releasing medicine over time.

After 10 weeks of continued once-weekly dosing, BYDUREON BCise keeps a consistent level of medicine in your body, working for you 7 days a week.

How BYDUREON BCise® may help give you consistent control of your blood sugar

BYDUREON BCise is slowly released into your body—over time—through an extended-release delivery system. See for yourself how it’s ready to work when you need it to help lower your blood sugar.*

*Following 10 weeks of once-weekly dosing when the level of medicine in your body should be at the optimal level.

BYDUREON BCise® is ready to work when you need it*

BYDUREON BCise is a type 2 diabetes medicine that is slowly released into your body over time, working to help your body release its own insulin when it’s needed to help lower blood sugar.

Liver
With type 2 diabetes, a hormone called glucagon causes the liver to make sugar when it’s not needed. BYDUREON BCise mimics the actions of GLP-1, a natural hormone, to help prevent the release of glucagon.

Stomach
With type 2 diabetes, the stomach moves food along faster than it should, and that sends sugar into the blood faster. BYDUREON BCise works to slow down how quickly the stomach empties sending sugar into the blood stream more slowly.

Pancreas
With type 2 diabetes, too little insulin is produced by the pancreas to keep blood sugar levels normal. BYDUREON BCise mimics the GLP-1 hormone to help your pancreas release insulin when blood sugar needs to go down.*

*After 10 weeks of continued once-weekly dosing, BYDUREON BCise keeps a consistent level of medicine in your body, working for you 7 days a week.

A non-insulin treatment option.

BYDUREON BCise is not insulin; it is a type 2 diabetes medicine that is slowly released into your body over time, working to help your body release its own insulin when needed to lower blood sugar.

Learn how to use the BYDUREON BCise Device

Message and data rates may apply.

Please read Medication Guide and Full Prescribing Information, including Boxed WARNING.
Just once each week
With or without food
On the same day each week that best fits your busy schedule

Remember, you need to continue to take BYDUREON BCise exactly as your doctor or healthcare provider has prescribed it, along with continuing to follow the treatment plan they’ve recommended.

If you miss a dose of BYDUREON BCise, take the missed dose as soon as possible if there are at least 3 days (72 hours) until your next scheduled dose. If there are less than 3 days remaining, skip the missed dose and take your next dose on the regularly scheduled day. **Do not** take 2 doses of BYDUREON BCise within 3 days of each other.

You may change the day of the week as long as your last dose was given 3 or more days before.

**Please read** Medication Guide and Full Prescribing Information, including Boxed WARNING.
MIX the medicine

Keeping the device locked with the orange cap pointing toward the ceiling, mix the medicine by **shaking the device hard in an up-and-down motion for at least 15 seconds.** The device may need to be shaken longer than 15 seconds if it has not been correctly stored flat.

**Check the mix** by holding the device up to the light and looking through both sides and the bottom of the window. If not mixed well, repeat mixing step and check again.

After the medicine is fully mixed, you must complete the preparation steps **right away,** and inject to get the full dose. **Do not save it to use later.**
AstraZeneca cannot provide medical advice and can only provide information about AstraZeneca medications. Decisions regarding your health and treatment of your condition should be made with your own healthcare provider.

†See eligibility requirements on page 9. Restrictions apply.

Please read the accompanying Instructions for Use for complete instructions.

**Nurse injection help when you need it**

Have questions about how to use BYDUREON BCise? Or injecting for the first time? Feel free to talk or video chat with one of our BYDUREON BCise nurses for the support you need.

You can speak to a nurse by calling

1-844-MY-BCISE (1-844-692-2473)
8 AM – 8 PM ET, Monday – Friday and 10 AM – 6 PM ET, Saturday and Sunday*

To schedule an appointment with a Nurse to walk you through how to use BYDUREON BCise, go to BCiseNurseSupport.com

Storing BYDUREON BCise

BYDUREON BCise should be stored flat in the refrigerator. However, it may be kept at room temperature for up to 4 weeks, so you can take your weekly dose when it is convenient for you.

Please read Medication Guide and Full Prescribing Information, including Boxed WARNING.

It’s important you know what to expect with treatment

You may not see noticeable results in your blood sugar numbers right away. Don’t worry; this does not mean that BYDUREON BCise is not working.

**How BYDUREON BCise® builds to its optimal level.** BYDUREON BCise releases the medicine gradually and continually over time. With each weekly dose, the amount of medicine in your body builds up until it reaches an optimal level after 10 weeks, to help give you consistent control of your blood sugar 7 days a week.

---

**Are there any side effects with treatment?**

Some adults taking BYDUREON BCise can get a small raised bump under their skin.

- This is a normal body response to the tiny beads in BYDUREON BCise that slowly release medicine over time
- The bump usually disappeared in an average of 4 weeks in clinical studies with BYDUREON, a medicine with the same active ingredient as BYDUREON BCise.

Serious injection-site reactions, with or without bumps (nodules), have happened in some people who use BYDUREON. Some of these injection-site reactions have required surgery. If you have any symptoms of injection-site reactions, including severe pain, swelling, blisters, an open wound, or a dark scab, be sure to call your healthcare provider.

Nausea is also a common side effect with BYDUREON BCise. Nausea is most common when you first start using BYDUREON BCise but decreases over time in most people as their body gets used to the medicine.

Other side effects that occur less often include headache, diarrhea, vomiting, injection-site itching and redness, dizziness, and constipation.

Your risk of low blood sugar may be higher if you use BYDUREON BCise with another medicine that can cause low blood sugar, such as a sulfonylurea or insulin.

These are not all the possible side effects of BYDUREON BCise. See the Important Safety Information on page 10 and talk to your healthcare provider if you have any side effects that bother you or do not go away.

MAIL-ORDER INSTRUCTIONS

If you use a mail-order pharmacy (or if your pharmacy does not accept the BYDUREON BCise Savings Card), then follow the steps below:

1. Call your mail-order pharmacy to see if they accept the BYDUREON BCise Savings Card. If they do, provide them with your BYDUREON BCise Savings Card number after they receive your prescription. You will receive your rebate when the pharmacy processes your prescription payment.

2. If your mail-order or retail pharmacy does NOT accept the BYDUREON BCise Savings Card:
   a. Call 1-855-292-5968 to request a patient rebate form, or go to www.bydureonbcisesavings.com to download a form.
   b. When you receive your form, complete and sign it, Next, attach the original mail-order receipt and return it to the address listed on the form.
   c. Remember to keep a copy of your receipts for your records. You should receive your rebate check in 3 to 4 weeks.

3. You will need to request/download a form each time you get a refill of your prescription and complete steps 2a and 2b to receive your rebate.

ELIGIBILITY: You may be eligible for this offer if you are insured by commercial insurance and your insurance does not cover the full cost of your prescription, or you are not insured and are responsible for the cost of your prescriptions. Patients who are enrolled in a state or federally funded prescription insurance program are not eligible for this offer. This includes patients enrolled in Medicare Part D, Medicaid, Medicare, Veterans Affairs (VA), Department of Defense (DOD) programs or Tricare, and patients who are Medicare eligible and enrolled in an employer-sponsored group waiver health plan or government-subsidized prescription drug benefit program for retirees. If you are enrolled in a state or federally funded prescription insurance program, you may not use this savings card even if you elect to be processed as an uninsured (cash-paying) patient. This offer is not insurance, is restricted to residents of the United States and Puerto Rico, and to patients over 18 years of age.

TERMS OF USE: Eligible commercially insured patients with a valid prescription for BYDUREON® (exenatide extended-release) for injectable suspension 2mg or BYDUREON BCise® (exenatide extended-release) for injectable suspension 2mg who present this savings card at participating pharmacies will pay as low as $0 per 28-day supply maximum savings limit applies; patient out-of-pocket expense may vary. If you pay cash for your prescription, AstraZeneca will pay up to the first $150, and you will be responsible for any remaining balance, for each monthly prescription. Other restrictions may apply. Patient is responsible for applicable taxes, if any. Non-transferable, limited to one per person, cannot be combined with any other offer. Void where prohibited by law, taxed or restricted. Patients, pharmacists, and prescribers cannot seek reimbursement from health insurance or any third party for any part of the benefit received by the patient through this offer. AstraZeneca reserves the right to rescind, revoke, or amend this offer, eligibility and terms of use at any time without notice. This offer is not conditioned on any past, present or future purchase, including refills. Offer must be presented along with a valid prescription at the time of purchase. For additional details about this offer, please visit www.BYDUREON.com. If you have any questions regarding this offer, please call 1-866-680-9081.

BY USING THIS CARD, YOU AND YOUR PHARMACIST UNDERSTAND AND AGREE TO COMPLY WITH THESE ELIGIBILITY REQUIREMENTS AND TERMS OF USE.

Pharmacist Instructions for a Patient with an Eligible Third Party:
For Insured/Covered Patients: Submit the claim to the primary Third-Party Payer first, then submit the balance due to CHANGE HEALTHCARE as a Secondary Payer COB with patient responsibility amount and a valid Other Coverage Code of 8. This will reduce the eligible patient’s out-of-pocket costs to as low as $0 per 28-day supply subject to a maximum savings limit for the program, patient out-of-pocket expenses may vary. Reimbursement will be received from CHANGE HEALTHCARE.
Pharmacist Instructions for Insured/Not Covered Patients: Submit the claim to the primary Third-Party Payer first, if the primary claim submission shows a managed care restriction (step-edit, prior authorization or NDC block), continue the claim adjudication process and submit the balance due to CHANGE HEALTHCARE as a Secondary Payer COB with patient responsibility amount and a valid Other Coverage Code of 3. This will reduce eligible patient’s out-of-pocket costs to as low as $0 per 28-day supply subject to a maximum savings limit for the program, patient out-of-pocket expenses may vary. Reimbursement will be received from CHANGE HEALTHCARE.
Pharmacist Instructions for a Cash-Paying Patient: Submit this claim to CHANGE HEALTHCARE. A valid Other Coverage Code (eg. 1) is required. The card will cover up to $150 per 28-day supply. Reimbursement will be received from CHANGE HEALTHCARE. Valid Other Coverage Code Required. For any questions regarding CHANGE HEALTHCARE online processing, please call the Help Desk at 1-800-422-5604.

What if I get small bumps at the injection site?

Some adults taking BYDUREON BCise can get a small raised bump under their skin. This is a normal body response to the tiny beads in BYDUREON BCise that slowly release medicine over time, and the bump usually disappeared in an average of 4 weeks in BYDUREON clinical studies.

Serious injection-site reactions, with or without bumps (nodules), have happened in some people who use BYDUREON, a medicine with the same active ingredient as BYDUREON BCise. Some of these injection-site reactions have required surgery. If you have any symptoms of injection-site reactions, including severe pain, swelling, blisters, an open wound, or a dark scab, be sure to call your healthcare provider.

**IMPORTANT SAFETY INFORMATION**

BYDUREON BCise may cause serious side effects, including:

- **POSSIBLE THYROID TUMORS, INCLUDING CANCER** Tell your healthcare provider if you have had an allergic reaction, including itching, rash, or difficulty breathing, to the thyroid hormone or to any of the other ingredients in BYDUREON BCise.

- **Inflammation of the pancreas (pancreatitis)** Stop using BYDUREON BCise and call your healthcare provider right away if you have severe pain in your stomach area (abdomen) that will not go away, with or without vomiting. You may feel the pain from your abdomen to your back.

- **Low blood sugar (hypoglycemia)** Your risk for getting low blood sugar may be higher if you use BYDUREON BCise with another medicine that can cause low blood sugar, such as a sulfonylurea or insulin. Tell your healthcare provider if you take other diabetes medicines. Talk to your healthcare provider about managing low blood sugar. Signs and symptoms of low blood sugar include dizziness or lightheadedness, sweating, confusion or drowsiness, headache, blurred vision, slurred speech, shakiness, fast heartbeat, anxiety, irritability, mood changes, hunger, weakness, or feeling jittery.

- **Kidney problems** Tell your healthcare provider if you have or had kidney problems. In people who have kidney problems, diarrhea, nausea, and vomiting may cause a loss of fluids (dehydration), which may cause kidney problems to get worse or kidney failure.

- **Stomach problems** Tell your healthcare provider if you have severe stomach problems, such as slowed emptying of your stomach (gastroparesis) or problems digesting food. Other medicines like BYDUREON BCise may cause severe stomach problems. It is not known if BYDUREON BCise causes or worsens stomach problems.

- **Low blood platelet count** BYDUREON BCise may cause the number of platelets in your blood to be reduced. When your platelet count is too low, your body cannot form blood clots. You could have serious bleeding that could lead to death. Stop using BYDUREON BCise and call your healthcare provider right away if you have unusual bleeding or bruising.

- **Serious allergic reactions** Stop using BYDUREON BCise and get medical help right away if you have any symptoms of a serious allergic reaction, including itching, rash, or difficulty breathing.

- **Injection-site reactions** Serious injection-site reactions, with or without bumps (nodules), have happened in some people who use BYDUREON BCise. Some of these injection-site reactions have required surgery. Call your healthcare provider if you have any symptoms of injection-site reactions, including severe pain, swelling, blisters, an open wound, or a dark scab.

- **Gallbladder problems** have happened in some people who take BYDUREON or other medicines like it. Tell your healthcare provider right away if you get symptoms of gallbladder problems including pain in the right or middle upper stomach area, nausea and vomiting, fever, or your skin or the white part of your eyes turns yellow.

The most common side effects with BYDUREON BCise may include:

- A bump at the injection site and/or nausea. Nausea is most common when you first start using BYDUREON BCise, but decreases over time in most people as their body gets used to the medicine.

**Tell your healthcare provider about all of the medicines you take,** including prescription and over-the-counter medicines, vitamins, and herbal supplements, as taking them with BYDUREON BCise may affect how each medicine works.

Before using BYDUREON BCise, tell your healthcare provider if you are pregnant, nursing, or plan to become pregnant or nurse. BYDUREON BCise may harm your unborn baby.

**APPROVED USES**

- BYDUREON BCise is an injectable prescription medicine that may improve blood sugar (glucose) in adults with type 2 diabetes mellitus, and should be used along with diet and exercise.

- BYDUREON BCise is not recommended as the first choice of medicines for treating diabetes.

- BYDUREON BCise is not a substitute for insulin and is not for people with type 1 diabetes or people with diabetic ketoacidosis.

- It is not known if BYDUREON BCise can be used with mealtime insulin.

- Do not use BYDUREON, BYDUREON BCise, BYETTA or other medicines containing exenatide together.

- It is not known if BYDUREON BCise can be used in people with a history of pancreatitis.
